

# Adobe® Connect™ & Veritext

## Dynamic and engaging online legal depositions

The legal court reporting industry is increasingly leveraging video and web conferencing solutions to improve efficiencies and lower the costs of legal proceedings. With a goal of delivering the most advanced technology to its clients, Veritext, the market leader in court reporting and deposition solutions, has deployed StreamText Legal's new virtual legal deposition and transcription pod—designed exclusively for Adobe Connect—enabling legal clients to conduct depositions, meetings, and arbitrations regardless of geographic boundaries.

The team at eSyncTraining partnered with StreamText.Net to set a new standard for real-time streaming text for legal proceedings, integrating with Adobe Connect to create one of the most robust web conferencing technology platforms for the legal community. The group chose Adobe Connect, citing the flexibility and extensibility of the solution. The development team further customized the pod for Veritext, whose version is being released under the name Veritext Virtual. "The StreamText Legal pod has helped to revolutionize the way we conduct depositions and arbitrations," says David DaSilva, Veritext director of regional video operations.

*"The combination of these technologies brings a great benefit to our clients: the litigation attorney, who can manage their meetings in a single virtual location, and the deposition participants, who are able to watch, track, search, and document in a single interface."*

**Peter Florian, Senior Vice President, Veritext**

## Streamlined virtual legal proceedings

Veritext has been using Adobe Connect for large multilocation arbitrations and meetings with audio, video, and screen sharing around the country. The new custom pod, StreamText Legal, enhances the user experience with full video functionality and searchable transcripts available within a single Adobe Connect room. "The combination of these technologies brings a great benefit to our clients: the litigation attorney, who can manage their meetings in a single virtual location, and the deposition participants, who are able to watch, track, search, and document in a single interface," says Peter Florian, senior vice president at Veritext.

With the StreamText Legal custom pod, clients are able to merge the full feature set of Adobe Connect to support the unique needs of the legal industry. By offering real-time transcripts for easy sharing, saving, and managing of legal documents, Veritext Virtual and StreamText Legal fit perfectly into the workflow

whether the deposition is one day or across many months. The reliable and secure hosted platform of Adobe Connect supports the strict requirements of the legal industry and IT departments.

The user-friendly environment allows easy access to meetings and transcripts as well as dynamic search, archival, and reporting functionality. "Our users are excited to streamline and enhance the way the video and transcript are delivered to meeting participants, and at the same time we are excited to be able to provide them with this product and break new ground for them to improve the user experience," says DaSilva.
